

A fixed residual scale, tested on real recordings

a Same forecast; contracted displacement

$$\tilde{z}_h = z_0 + \alpha (\hat{z}_h - z_0)$$

Train-fitted α · fixed at inference

Standard calibration control

Schematic · seed 0: $\alpha = 0.908$

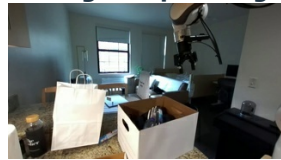

— Ours, original — Ours, calibrated — Framewise, calibrated

Actual observations from the first eligible window

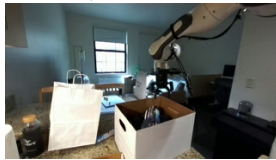

That window's error

b Largest episode gain

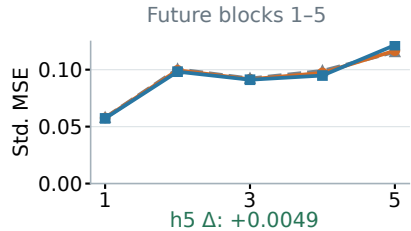

Episode Δ : +0.0069

Last support · 10

Recorded future · 35

c Median episode

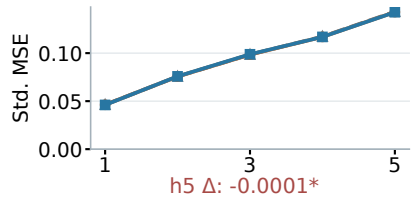

Episode Δ : +0.0009

Last support · 10

Recorded future · 35

d Largest regression

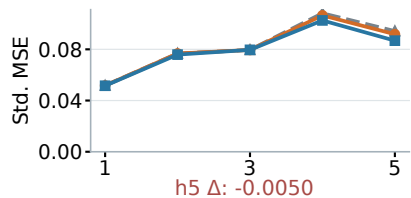

Episode Δ : -0.0040

Last support · 10

Recorded future · 35

e All 65 episodes

46 gains · 19 regressions

Population mean + 95% CI
