

1 Observe

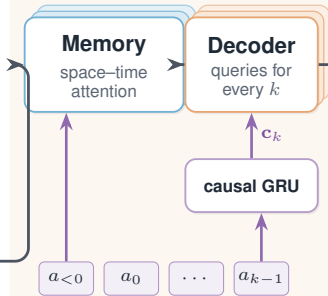

3 observed frames

frozen DINO encoder

$\mathbf{Z}_{-2:0}$

2 Condition on actions

3 Move, then correct

$$\hat{\mathbf{Z}}_k = (1 - g_k) \mathbf{Z}_0 + g_k \mathbf{T}_k + \mathbf{r}_k$$

(a) transport of observed features

$\hat{\mathbf{Z}}_{1..K}$

(b) gate g_k

(c) correction

$\mathbf{r}_k$
new content

$\mathbf{Z}_0$

observed features are reused at every horizon — never the model's own forecast
