

PushT

Unbounded mixing

Success difference vs. AR (pp)

This forest plot for PushT Unbounded mixing shows a mean success difference of approximately -2 pp. The x-axis ranges from -60 to 10 with major ticks every 20 units. A vertical dashed line is at 0. The plot includes a purple diamond at -2, a horizontal error bar from -8 to 8, and three vertical purple lines at approximately -5, -2, and 1.

Estimate	Lower CI	Upper CI
-2	-8	8

Bounded mixing

Reacher

Success difference vs. AR (pp)

This forest plot for Reacher Bounded mixing shows a mean success difference of approximately -52 pp. The x-axis ranges from -60 to 0 with major ticks every 20 units. A vertical dashed line is at 0. The plot includes a blue diamond at -52, a horizontal error bar from -62 to -42, and three vertical blue lines at approximately -58, -55, and -48.

Estimate	Lower CI	Upper CI
-52	-62	-42
