

Historical context model (ours) · DROID validation

a Optimization / capacity

Context – Framewise

Endpoint

Slow 5
Slow 10
Decay 5
Decay 10
Compact 5
Compact 10

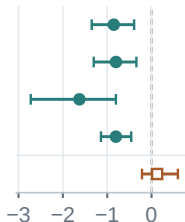

b Training horizon

h10-trained – h5-trained

Mean h10; last row h5

Framewise
Constant
Context
Action-free

Context h5

c Matched methods

Context – Framewise

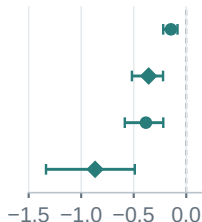

Both h10-trained

h5 mean

h5 end

h10 mean

h10 end

Δ standardized MSE ($\times 10^{-3}$); left favors the first named model.

Secondary: context h5 mean -0.116% gain (CI crosses zero).
